FOR IMMEDIATE RELEASE

July 18, 2022

We are pleased to announce that Jobsite Industrial Rental Services has entered into an agreement with Elephant Lifting Products LLC to be their Canadian Master Distributor. This agreement came into effect July 1, 2022.

Since Jobsite Industrial Rental Services opened its doors in 1987, we have carried the JET L90 manual chainfall as our primary product in our rental fleet. In 2012, we made the move to JET MMII pullers (come-a-longs). Our belief in these precision, Japanese-made hoisting products has positioned Jobsite Industrial Rental Services as the leader in this industry. In 2015, we communicated with our customer base that we will not be carrying "offshore" hoisting equipment as we saw customers struggling with the quality of these products.

Jobsite Industrial Rental Services looked at a number of different options to support our (over 4000 strong) hoisting fleet, as well as the sales of these products. After reviewing a number of "offshore" products, we were left with the need to find a precision Japanese-made product that offers the same or better quality of the L90/MMII lines.

Effective immediately, we will no longer be providing the L90 chainfall and MMII pullers from JET and will be moving to Elephant Lifting products made in Japan. Jobsite Industrial Rental Services will continue to supply all other products and services from Surewerx, including JET, Peakworks, Strongarm, Pioneer and others. Our partnerships remain strong.

The YA Puller line from Elephant Lifting Products is identical to the MMII. For manual Chainfall products (up to 5 ton) we have chosen to use the C-21 line. This is a high quality product that offers the precision our customers have come to expect, but in a smaller and lighter footprint.

Elephant Lifting Products also carries an extensive line of Manual, Electric and Pneumatic hoists that we will be offering to our customer base across Canada. We are excited about this new chapter for Jobsite Industrial Rental Services as we continue to offer solutions to our customers that help them achieve their workplace goals.

Elephant Lifting Products will now transition into our rental fleet. They are made at the same factory in Osaka, Japan where the L90 and MMII lines have been made for many years. We will also maintain our access to all parts.

In the days to come, our sales team will be reaching out to discuss the new lines with you. In the meantime, if you have any questions, feel free to reach out to any of our staff.
